To Whom It May Concern:

Re: ***Corrections to patent number 7,194,072 B2, Insert Pages Office left out***

My name is Oliver W. Gamble, and I am the inventor of patent 7,194,072 B2. This patent was issued March 20, 2007. The title of this patent is “Method And System For Remotely Accessing And Controlling Remote Devices”.

I am contacting the patent office regarding an error in which the enclosed pages were not included in the abovementioned patent. This error was the fault of the USPTO. The missing material was deleted from my patent. Please insert the missing material back into my patent. I am inclosing a copy of the missing material in this mailing.

I have tried several times to contact the USPTO’s Certificate Of Correction office by telephone: several voice mails left. I have not been contacted by anyone in response to my inquiries. It has been over a week, therefore I am sending this letter.

My initial filing of a Certificate Of Correction was returned with the enclosed note “Need Transmittal Letter” inked in over the “request is unsigned box”. There is not place on the form for a signature, nor is there any mention of a signature in the documentation that accompanies the form SB44. I contacted the Inventor Assistancess Center, and was told to include a cover letter stating my desired for inclusion of the missing material, and stating who is at fault for the missing material.

Regards,

Oliver W. Gamble

Inventor Of Patent 7,194,072 B2

It is certified that an error appears or errors appear in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

Fig. 7, item 703: Inputted instructions from a variety of remote input terminals,

Fig. 7, item 705: The Central Site can stores information, until it is ready to act on it.

Fig. 7, item 710: The Central Site processes received information and validates the user's identity.

Fig. 7, item 715: If valid, the user's EA router access code, and model number information are retrieved from the user's record.

Fig. 7, item 720: If valid, the user's EA router access code, and model number information are retrieved from the user's record.

MAILING ADDRESS OF SENDER (Please do not use customer number below):

This collection of information is required by 37 CFR 1.322, 1.323, and 1.324. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1.0 hour to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Attention Certificate of Corrections Branch, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Page 2 of 13

It is certified that an error appears or errors appear in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

Fig. 7, item 725: This information is used to generate a numeric string that encodes the command instructions that are required to effectuate the recording.

Fig. 7, item 725: The central site validates the user's identity and collects information regarding the program the user wants to record: day of recording, time of the recording, channel from which to record the program. The central site then generates a string of DTMF tones that encodes the user's access code, channel from which the recording is to be made, the commands to activate the VCR, the commands for rewinding the tape, and the commands for start recording.

MAILING ADDRESS OF SENDER (Please do not use customer number below):

This collection of information is required by 37 CFR 1.322, 1.323, and 1.324. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. INVENTOR(S) : **Oliver W. Gamble**

Page 3 of 13

It is certified that an error appears or errors appear in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

Fig. 7, item 730: The central site sends the code out anywhere from 5 to 10 minutes before the desired recording time. This reduces the size and amount of coding required to be sent. In another embodiment, the string of DTMF tones sent to the EA router 120A contains coding information for selecting date and time. In other embodiments, the central site may allow interaction with the user's device directly.

Fig. 7, items 735 & 740: String of DTMF tones may be transmitted to the EA router 120A. The position and length of each component of the encoded instructions to the recording device is preset, allowing the EA router 120A to easily convert the central site transmitted data string into an access code, instructions codes that mimic the recording device remote control unit, and a termination flag.

MAILING ADDRESS OF SENDER (Please do not use customer number below):

This collection of information is required by 37 CFR 1.322, 1.323, and 1.324. Page 4 of 13

It is certified that an error appears or errors appear in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

Fig. 7, item745: The central site generates a string of DTMF tones that encodes this information as shown above. In one embodiment the registered EA router's access code is attached to the beginning of the encoded information, and the end of data flag (#) is attached to the end of the encoded information. The access code allows the EA router 120A to determine if the captured string of DTMF-tones should be accepted. The end of data flag tells the EA router 120A when the end of the string of DTMF tones is reached, and that it can now begin to process the string into code signals that will mimic a remote control unit.

It is certified that an error appears or errors appear in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

In Figure 8, there is a user (Step 1) contracting a Central Site (Step 3) via a communication network (Step 2). The Central Site will accept inputted instruction in the form of DTMF tones transmitted over a communication network. The Central Site will process and store the data at the Central Site (Step 4). The Central Site will then forward the process input from the user to a remote location (Illustration 1, item 200) over a communication network (Step 5 and Step 6). At the Remote location the EA-Router (AKA Device at Remote location) will accept and evaluate the information from the Central Site. If a valid authorization code is detected, the EA-Router will forward the Instructions from the Central Site to the targeted appliance (VCR) by Infrared signals.
